

# Packing & Shipping

## **Avoid broken models**

- Wrap each and every stone model in tissue paper, bubble wrap, or paper towel.
- Shake the box. If you hear rattling, rewrap to cushion the models.

## **Avoid Missing Parts**

- Be sure to seal small parts, like screws, tooth chips, and implant parts in boxes or bags.
- Use gallon size bags to separate each case individually and staple to Rx to the bag. This keeps the case parts together and keeps the Rx dry, especially when packing several cases in one box.
